RoHS Compliant model

ALARM 1 2 3

Huge 2GB Flash Memory, modular system allows expansion up to 200 channels

Isolated channels, each with multifunction input

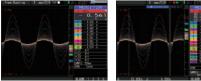

It contains an isolated input system which ensures that signals are not corrupted by inputs to other channels, thus eliminating wiring concerns. The GL820s multi-type inputs are suitable for voltage, temperature, humidity, pulse, and logic signals, enabling combined measurements of different phenomena like temperature/humidity and voltage.

and use the optional Logic/Alarm cable (B-513 option)

5.7-inch VGA TFT colour LCD

Utilises a bright clear 5.7-inch wide TFT color LCD monitor (VGA: 640 x 480 dots). Makes it easy to read data in waveform or digital form and to check your measurement parameter settings

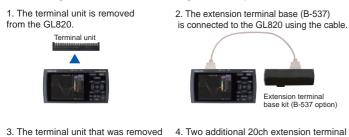

eform display (Analog + Digital) Dual display (Current + Past)

Waveform display (Analog only)

Standard unit has 20 analogue input channels, expandable up to 200 channels

The standard configuration has 20 analogue input channels. It can be expanded up to 200 channels by adding optional 20 channel extension terminal kits.

The following shows how a standard configuration is expanded to 60 channels.

3. The terminal unit that was removed from the GL820 is connected to the extension terminal base (B-537)

Maximum sampling rate of up to 10ms

Provides faster sampling rates for voltage measurements. Can achieve 10ms sampling interval when limiting the number of channels in use.

Built-in 2GB Flash Memory for reliable long term measurement

The 2GB Flash Memory enables secure long term data measurement without using an external storage device. Data is retained even when power is turned off because flash memory is used. Also supports popular USB memory sticks for external storage. The GL820 saves easured data directly to USB memory sticks. USB memory sticks can e replaced during measurement without data loss.

*3: The above figures are approximate. *4: The sampling rate is limited by the number of channels in use. (10ms: 1ch, 50ms: 5ch, 100ms: 10ch) *5: Standard USB memory devices without high-end functions such as fingerprint recognition are required.

Ring memory function

The most recent data is saved when internal memory or external memory is configured in ring memory mode. (Captured data size in ring memory mode is limited to 1/3 of available memory.)

Supports USB memory devices, Easy connection to PC via USB or Ethernet

Captured data can be saved directly to USB memory sticks when these are chosen for external storage. In addition, the GL820 can be controlled by a PC if connected by USB cable, allowing transfer of data to a PC in real-time. If you need to move large data files to your PC then the GL820 can emulate an external USB drive for quick data transfer. The WEB & FTP server function. FTP client-server function and NTP client function are supported when the GL820 is connected to the LAN via the Ethernet port.

Hot-swappable WEB & FTP server function The GL820 can be controlled Save data directly t The GL820 can be composed by using the WEB browser, which also supports monitoring and transfer of signals and connecting connecting USB memory stick to the LAN o PC by FTP client function by Ethe Captured data is periodically nsferred to the FTP serve ring data to the for backup. application software Transferring data to PC in USB NTP client function The clock on the GL820 is Drive mode periodically synchronised with the NTP server.

Alarm output function

Alarm signals can be output when alarm conditions occur."6 Four alarm output ports are fitted

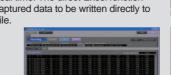

*6: The Logic/alarm cable, (B-513 option), is needed to connect the alarm output ports.

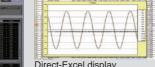

Easy application software

Various measurement screens

Select from 4 screens such as the Y-T (waveform + digital), Y-T (large waveform), digital view and report view to display measurements in real time. The direct-Excel function enables captured data to be written directly to an Excel file.
